

Instructions for integrating R006 module into a host system.

Host system labeling

The host system must include a label that contains the following:

“Contains FCC ID: 2AGSF-R006”

End Product Manual

The manual for the end product must contain the following statements:

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference and (2) this device must accept any interference received, including interference that may cause undesired operation.

WARNING: To satisfy FCC RF exposure requirements for mobile transmitting devices, a separation distance of 20cm must be maintained between the antenna of this device and all persons. The antenna used for this transmitter must not be co-located in conjunction with any other antenna or transmitter.

End product limitations

Module is intended for installation in devices manufactured by Sensor Industry.

The module must be used with the non-removable antenna provided. Modifications of the module, including the antenna, could void the user’s authority to operate the equipment.

The module can only be used in a host system such that the antenna can maintain a 20cm separation distance to all persons. In addition, the module can not be co-located with another transmitter. Failure of either of these items would violate the FCC certification.
