

Instructions for integrating S001 module into a host system.

Host system labeling

The host system must include a label that contains the following:

“Contains FCC ID: 2AGSF-S001”

End Product Manual

The manual for the end product must contain the following statement:

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference and (2) this device must accept any interference received, including interference that may cause undesired operation.

End product limitations

Module is intended for installation in devices manufactured by Sensor Industry.

The module must be used with the non-removable antenna provided. Modifications of the module, including the antenna, could void the user’s authority to operate the equipment.

The module can not be co-located with another transmitter. Failure to ensure this condition would violate the FCC certification.
